

# GSLearn-Mobile App Use for Troop Leaders

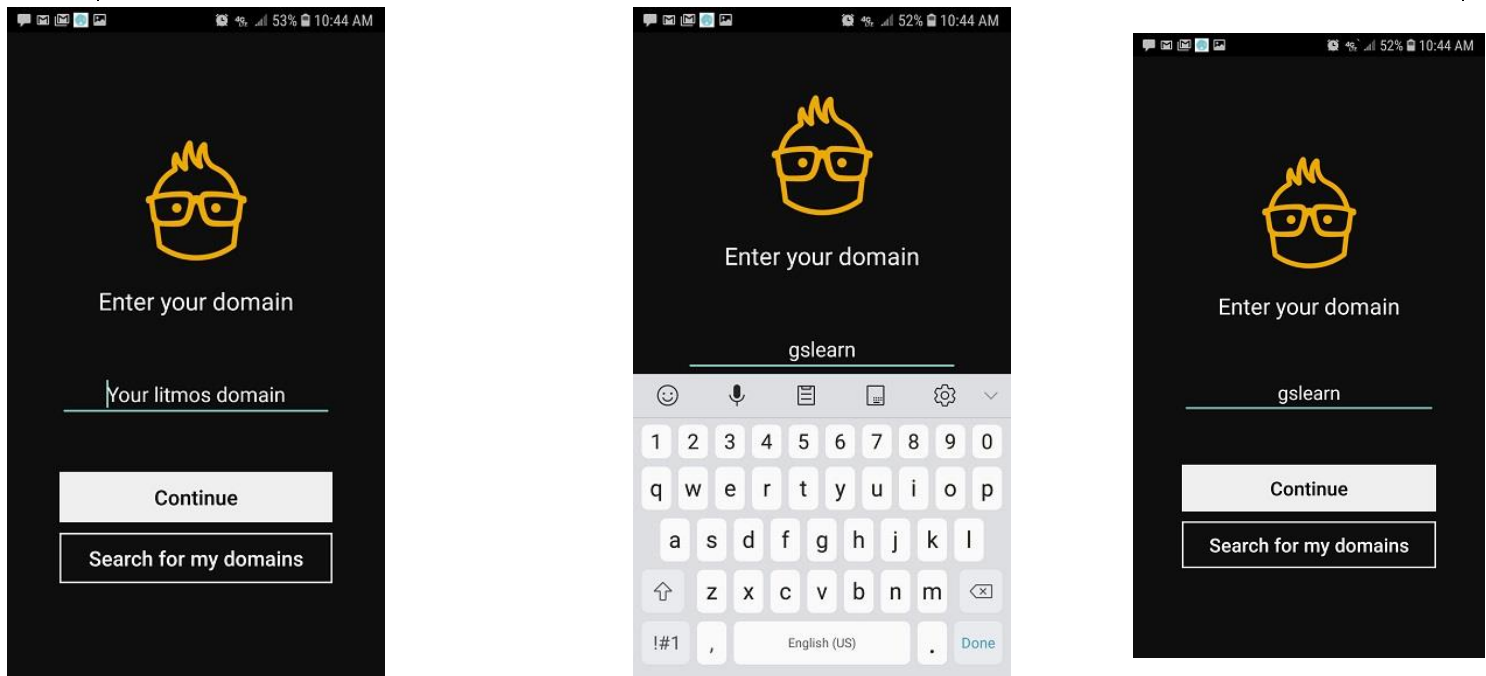

- GSLearn is available for registered Girl Scout Volunteers

**The app requires its own credentials.**

Step 1	Access your provider's app store (ex: itunes, google play, etc.) Search for <b>SAP Litmos</b> (You will enter GSLearn and see Girl Scout branding later in this step by step walk thru.)
Step 2	Select it from the list. Click Install. Once installation is complete, click Open.

Step 3	After clicking open you will land on the screen at the left. Enter the domain name gslearn (all lowercase, no spaces). Click continue.
--------	--

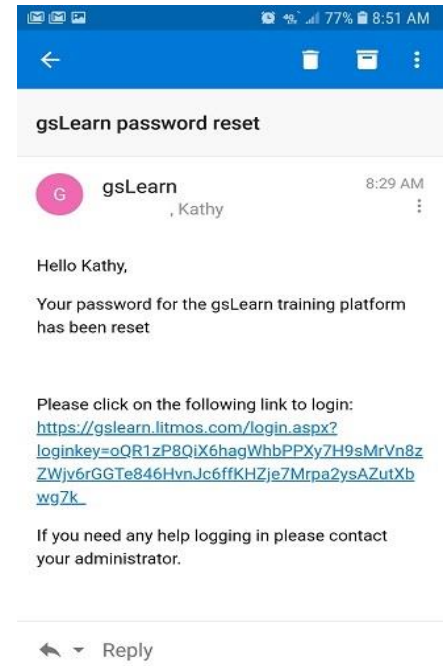

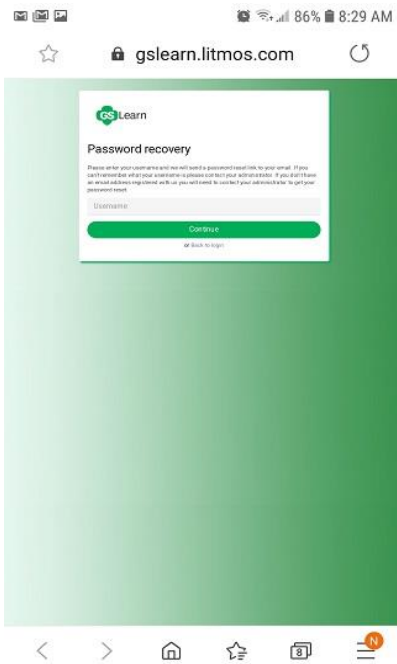

Step 4  
You may receive a popup asking you to allow the app access to your phone's files. Accept as you see fit. If you choose not to allow access, and not to continue to use the mobile app, you will continue to have access to GSLearn from your computer/laptop/internet using GSLearn link from your council's web page.

Enter your user name (user name is the email address you use for your Girl Scout communication) and click forgot password.

Step 5  
Enter your user name again in the password recovery screen. You will receive an email to reset your password. This does not change your SSO password. It creates a new path to access gsLearn.

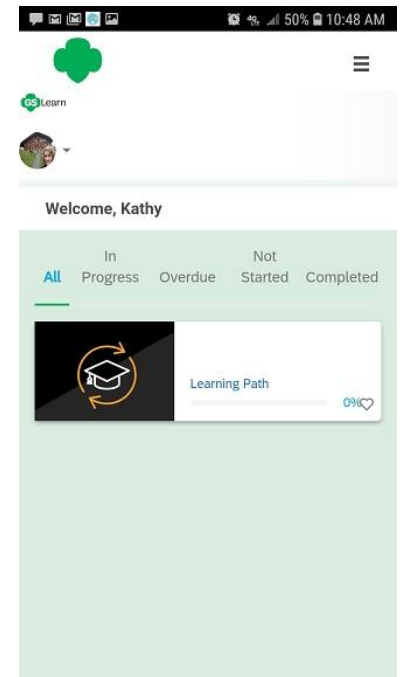

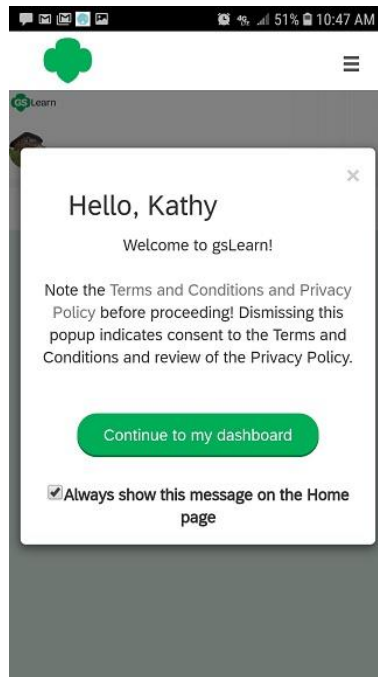

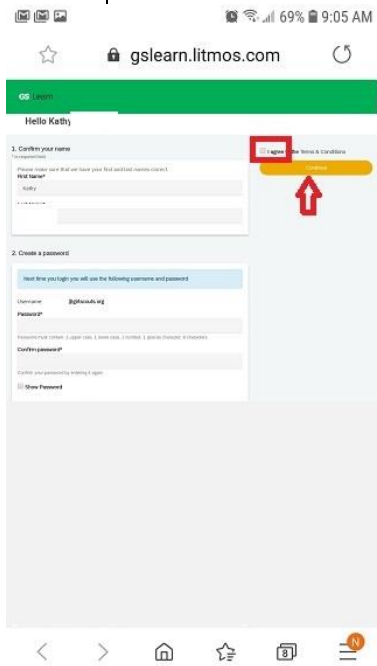

Step 5

Follow the prompts to set/reset your password. The password you create is used to open GSLearn **from the app**.

After resetting the password you will be directed to the Welcome page.

Clicking close (X) on the welcome message indicates your consent to the user terms and conditions. Continue to dashboard.

You are now ready to complete your courses from your phone or tablet.
